## Grease One-Way Logistics and Distribution

Get a Solution as Good as GOLD

## ExxonMobil's GOLD System Maximizes Lubrication Operations

Transportation of grease has long been a challenge to industry. Now, ExxonMobil offers a better system for moving and dispensing industrial and automotive greases.

The ExxonMobil GOLD (**G**rease **O**ne-Way **L**ogistics and **D**istribution) System uses the latest packaging technology to maximize your investment in ExxonMobil grease products. The system preserves the original high quality of ExxonMobil grease products — not only during transportation and storage, but also during discharging.

Also, in keeping with our tradition of rigorous product testing, the ExxonMobil GOLD System was put to the test in field trials at major industrial operations. These tests showed that the ExxonMobil GOLD System can produce substantial cost savings compared to conventional totes and drums.

As a result, you can maximize the performance of your lubrication operations. Some of the performance benefits include:

- Maintained Grease Quality
- Decreased Lubricant Costs by Reducing Lubricant Waste
- Improved Storage & Handling Safety
- Simplified Disposal
- Reduced Maintenance Hours Associated with Lubrication
- Minimized Downtime
- Improved Equipment Reliability

The ExxonMobil GOLD System rapidly pays for itself by reducing lubricant waste and maintenance hours to deliver lower total costs for your entire operation.

## ExxonMobil's GOLD System Benefits:

- Single use, clean inner container
- Easy set-up, operation and disposal
- ISO 9001/2000 compliant
- Automated dispensing mechanism
- Extremely low residual grease levels (0.5%)
- Discharge with no risk of contamination or ingress of air

## ExxonMobil GOLD System: Leading-Edge Grease Storage Technology

The ExxonMobil GOLD System allows you to get the most from your investment in industrial and automotive greases.

The key to the GOLD System is the Fluid-Bag Flexi, a combined transportation, storage and dispensing container that maintains original grease quality by preventing contact with air and contaminants. Manufactured with non-toxic, biodegradable materials, the container is used once and disposed of easily. As a result, you can gain significant improvements in many aspects of your lubrication program.

### Enhanced Operations and Cost Savings

By using the GOLD System, your operations will benefit from safer, easier transportation and handling, increased consistency in grease quality, more reliable discharge, and easier monitoring of consumption. No more messy totes to clean, repair, or return. Drum disposal will be a thing of the past.

The highly efficient design of the GOLD System's automated dispensing mechanism allows the Fluid-Bag container to gradually collapse as the grease product is discharged, with no ingress of air or other contaminants. Equally important, residual grease levels are as low as 0.5%, resulting in appreciably less waste, when compared to drums and totes.

## ExxonMobil Gold System — Easier, Safer Storage and Disposal

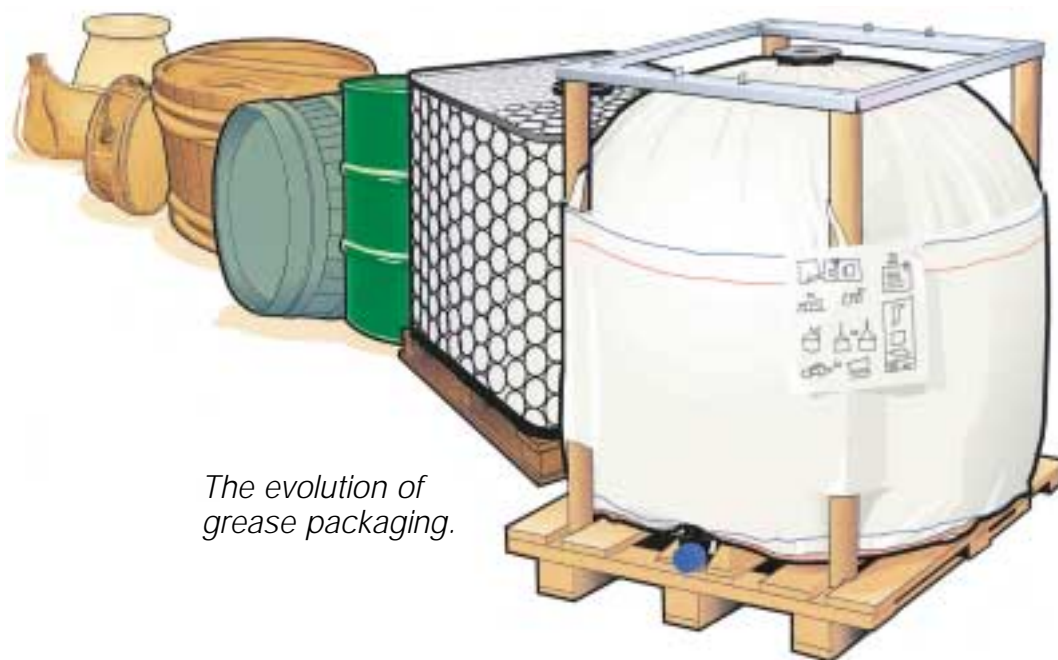

The ExxonMobil GOLD System is easily transported, stored, and used. The dispensing unit is easily installed and operated, requiring only pressurized plant air to operate. The system's inner container, which holds 1800 lbs (816 kg) of grease, is surrounded by a transport bag of strong polypropylene fabric equipped with four wooden corner poles, a transport pallet and a stacking frame. Replacing the container bag takes only minutes, and can be easily accomplished by one person.

When the grease product has been used completely, the disposable container eliminates the cost and effort of dealing with returnable totes, as well as the labor, cleanliness, and safety concerns associated with drum usage. Designed to meet the quality requirements of ISO 9001/2000, each container is individually tested by the manufacturer.

## Get a Solution as Good as GOLD

To maximize operational performance in today's business environment, you need lubricant storage and handling solutions that are more than just cost effective. You need systems that address safety and environmental concerns, as well as economic and logistical issues. GOLD is the answer!

The ExxonMobil GOLD System is specially designed to meet your grease storage and dispensing needs — today and tomorrow.
